

1200 Series Radio Nurse Call System

- ◆ Simple Installation
- ◆ Call Units are Self Contained
- ◆ Sophisticated radio technology for extended range

The Technical Alarm Systems range of Radio Nurse Call Systems are designed to meet the needs of residential homes, nursing homes and hospitals. They are designed to provide a fully featured system at an economical cost.

The installation of this type of system is very simple, requiring only a mains power supply to the battery backed up PSU which connects to the display panels.

The room call units run on self contained battery power, with a long life battery and automatic battery monitoring to the panel. When the battery requires replacing the panel will indicate which unit has sent the battery low signal.

Having no wiring involved to the room call units makes the system extremely flexible. The room call units can easily be moved as required and extra units can be added at any time.
